Replacement Straps Available.

Product Code: 28912

PBA Safety Spill Containment Indoor/Outdoor Caddy is a portable unit with wheels that allows one person to easily transport a full 200L drum and keep accidental spills under control, resisting unwanted chemical exposure from hazardous acids, caustics, and solvents.

Made from 100% recycled polyethylene and designed with an oversized sumps able to hold the contents of stored drums in the event of a leak or rupture—meeting or exceeding the most stringent spill containment regulations.

The ergonomically designed caddy comes complete with two tension straps to hold drums securely in place. The exclusive open-view sump design makes cleanup simple and quick, and the durable UV-protected polyethylene offers superior crack resistance and can withstand the harshest chemicals. This caddy is extremely sturdy. It is NFPA 30, OSHA, EPA, SPCC, and fire code compliant.

A spill caddy is one of the safest and most efficient way to store & move drums inside or outside, any time of year. Using a caddy not only allows for convenient, ergonomic movement with ease, but it easily accommodates a full leak from a 200L drum.

Our range of Spill Units are stocked nationwide and available for fast delivery.
